Environmental Policy

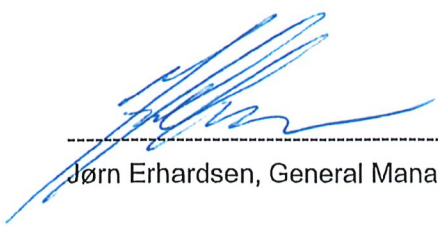

Helm Skandinavien A/S is storing, mixing, diluting and packing chemicals at their site in Hornslet and distributing to customers, mainly in Scandinavia.

The environmental policy is a statement, that Helm Skandinavien A/S is committed to the protection of the environment.

Our emission to water and air is affected by the products we handle and activities we carry out, and knowledge about each product and the interaction between the products is therefore extremely important. We will assure that we possess necessary information about products' environmental impact, so we can plan our activities and take precautions aligned with the potential environmental consequences. Additionally, our procedures and daily routines contain prevention against spillage, since prevention of spillage is essential for the environment. Should spillage still take place, we have tried to minimize the potential effects for the environment by means of our emergency plan and training of our staff. We re-use packaging materials extensively and dispose it for re-cycling afterwards.

By open communication we work to achieve the best possible solutions to benefit the environment.

- We see environmental protection as an essential point
- We have established and maintain an Environmental Management System, which meets the requirements of DS EN ISO 14001:2015
- We shall reduce our environmental impact by continuous improvement and achievement of determined targets within the environmental area
- We shall at a minimum follow the environmental rules and regulations, laws and local agreements
- We will always seek to achieve higher standards / norms than those fixed by the law
- We aim at a minimum use of resources and focuses on clean technology
- We work on offering products with reduced CO2 imprint, by use of other raw materials, production processes, and transport conditions. Further by re-use of chemical substances.
- We will continuously strengthen environmental awareness among employees through information
- We will minimize and preferably avoid working accidents

Jørn Erhardsen, General Manager
